Education

Kalinga Institute of Industrial Technology <i>Bachelor of Technology - Computer Science and Systems Engineering [CGPA: 7.89]</i>	Aug. 2021 – Aug. 2025 Bhubaneswar, India
B.D. Public School – 12th Boards CBSE	2021

Technical Skills

- **Technologies:** Python (Langchain, AssemblyAI, Seaborn, Pandas, NumPy, SKlearn, TensorFlow, PyTorch), MySQL, AWS.
- **Skills:** Machine Learning, Deep Learning, Large Language Model, RAG, Speech-to-text (ASR), CNN (Image Processing), Generative AI, REST API Design, WebSockets, Async Programming, Data Analysis, Data Visualization, SQL, Presentation Skills, C/C++ and Python programming.
- **Tools:** GitHub, Postman, DBeaver, Claude Code, Claude Cowork, OpenAI Codex, Google Gemini CLI, Ollama, LM Studio, NVIDIA Inference Microservice.
- **Platform:** PyCharm, Visual Studio, Jupyter Notebook, Anaconda, Google Antigravity IDE.

Experience

Cognizant (Full Time) <i>SAP ABAP</i>	July 2025 Bengaluru
• Trained in SAP ABAP development, including Data Dictionary, Reports, ModulePool and ALV. • Worked on internal tables, modularization, and performance optimization. • Developed a custom SAP ABAP MM report to analyse material master data with interactive/ALV views, drill-down navigation to MM03, and automated email reporting with excel attachments based on user inputs.	

Projects

DocNotes HMS — Hospital Management System (Link)	May 2025 – Present
• Built multi-tenant FastAPI backend with clinic-level isolation, 12-role RBAC, and JWT + OTP/MFA auth. • Designed async PostgreSQL schema (SQLAlchemy 2.0) across OPD, IPD, pharmacy, billing, and lab domains. • Built billing engine with TPA insurance, partial payments, OT charges, and per-doctor tariff overrides. • Integrated ABDM/ABHA health ID, Aadhaar encryption, and ICD-10/SNOMED compliance for Indian healthcare. • Built OpenAI Whisper voice transcription pipeline with automated PDF generation for prescriptions. • Tech Stack: FastAPI, PostgreSQL, SQLAlchemy 2.0, Pydantic v2, JWT, OpenAI Whisper, Tesseract OCR, ReportLab.	
ORION — Autonomous Robustness Evaluation Platform	Jan. 2026 – Present
• Built deterministic simulation engine with 50 Hz timestep and immutable WorldState for reproducible results. • Engineered dual-mode physics engine: kinematic bicycle model and Pacejka tire model with friction coefficients. • Designed four-metric evaluation pipeline (safety, compliance, stability, reactivity) via CompositeEvaluator. • Built FastAPI backend with JWT auth, multi-tenancy, model registry, and async Celery + Redis eval queue. • Architected 50 Hz WebSocket pipeline streaming simulation frames rendered client-side via WebGL (React Three Fiber). • Tech Stack: Python, FastAPI, PostgreSQL, NumPy, SciPy, Celery, Redis, React, Three.js, WebGL.	
Accident Detection and Emergency Response System (Link)	Aug. 2024 – Apr 2025
• Designed sensor-based crash detection model achieving 92%+ accuracy on real-time anomaly detection. • Implemented multiprocessing for 10+ concurrent users, improving detection latency by over 60%. • Integrated mobile, backend, and AI modules using MongoDB for synchronized data flow and communication. • Developed real-time accident detection using accelerometer, gyroscope, speed, and GPS data streams. • Automated emergency workflow reducing manual response time by 70% with live ambulance routing via Google Maps. • Tech Stack: Python, scikit-learn, Isolation Forest, MongoDB, React, Android (Java), Google Maps API.	

Certifications and Training

- **Oracle Cloud Infrastructure 2025 Certified Generative AI Professional** by Oracle University ([Link](#))
- **IBM Professional Certification** in Data Science from Coursera ([Link](#))
- **Hacker Rank SQL** (Basic + Intermediate + Advance), **Problem Solving** (Basic + Intermediate), **Python** (Basic) ([Link](#))
- **DevOps** certified by training and placement cell KIIT (Katallyst) ([Link](#))
